

SE-5WL

SE-6WL

SE-7WL

**surfaces:**

- 2R
- 2B
- brushed
- anti-slip R11-R13
- el-pol & color possible

**materials:**

1.4016 / 1.4301  
1.4401 / 1.4404  
1.4509 / 1.4571

Other materials  
and surfaces  
possible.

**standard  
formats:**

L x W  
2000 x 1000 mm  
2500 x 1250 mm  
3000 x 1250 mm  
3000 x **1500** mm

Fixed cuts from the  
coil to 6000 mm  
available at short  
notice.

**thicknesses:**

> 0.5 mm  
< 2.0 mm

# Made in Germany

## Especially suitable for:

- transport and conveyor technology
- automotive industry
- vehicle manufacturing
- machine cover
- facades
- cold storage room floor
- dividing wall construction
- packing machines

## Advantages:

- reduced adhesion as an conductive and sliding plate
- greater stability and rigidity compared to smooth sheet
- cost savings through reduced material thickness
- offcut optimization
- low wear

With our own manufacturing facility in the heart of Germany, we have the ability to produce the pattern SE-5WL/6WL/7WL now in the width dimension of 1500 mm.

We are able to produce continuously desired surfaces with our burst and grinding equipment to get the desired appearance.

The 21-roller straightening system meets modern standards and together with the rolling mill it is possible to certificate the surfaces according to DIN EN ISO 9001:2008.

Compared with the important advantages of our structures like reduced adhesion, increased rigidity compared to smooth sheet, such as

visual appealing and robust structure, we are able to offer a width of 1500 mm and a length of 6000 mm and now we have the additional opportunities by offcut optimization to save further costs.

Optimize the cost of production.

COUNT ON US.
